For optimal joint health

Active adults and athletes all agree that joint problems and constant joint soreness and tenderness can cause problems throughout your life. As we age, the natural glucosamine levels in our bodies decline. This decline in glucosamine, an amino sugar which helps stimulate the body's production of cartilage, can lead to gradual deterioration of our joints – ultimately leading to joint pain and stiffness as well as decreased mobility.

To help support healthy joints, NHT Global created Glucosamine 2200, a dietary supplement with a unique blend of glucosamine hydrochloride, shark cartilage, green lip mussel and more creating building blocks for healthy joints and cartilage production. Glucosamine 2200 also contains turmeric extract, speeding the supplement's action to provide more immediate benefits and helps reduce soreness and stiffness due to overexertion and physical activity and provide comprehensive joint health with increased antioxidant support.

Glucosamine is a natural compound in our bodies that helps make cartilage strong and rigid. Glucosamine builds the "cushion" in our joints and has been found to rebuild damaged joints, restore function and reduce pain in arthritic joints.
